

## Epiphany or Bust

Rain stretches from an unburdened sky, now spilt as glistening beads of glass upon the forest, shining and damp with fresh tears. The earth breathes and receives the offering, drinking until the river crests in a swollen arch; the mountains covered in feathered down and frost, snow heaped as flakes of light to feed the thin silver streams of summer. No sound creases the air, but pattering leaves and beaded rhythms, as breath gathers and retreats, crescendos and troths ... a cradle of damp breath to welcome the night, her voice as the ocean passes in waves unending...smooth and uneven. This is a perfect world.

Mankind stands now as always, perched each second before the possible, deciding to jump or hold, the call of a new beginning is that of silence, waiting to be filled in a leap. Clouds gather, and they are not filled with gentle rain. Sun and sky await, or the snarled teeth of an ever growing anguish and illness. We stand on the cusp of hope. There are questions without answers.

### Questions:

1. It appears there is a valid, working, effective method to treat MRSA and other antibiotic resistant pathogens and, a complete and specific protocol for its application. MRSA and many like diseases are cured. This is an example of what I call 'the patentable molecule.' It appears quite clearly that the for profit medical establishment in this country has not figured out how to gain money from this effective cure for antibiotic resistant pathogens, so people die. You can read of a great deal more of this sort of crime in our new book, which I will link here.

Effective method to treat MRSA

<http://www.prevention.com/health/health-concerns/cure-antibiotic-resistance>

**Our new book** concerning scientific suppression, physics, biology and hope. *Beyond the Veil: Deception, truth and the hidden promise of science.*

[https://www.amazon.com/Beyond-Veil-Deception-Thoughts-Conventional/dp/1541117409/ref=sr\\_1\\_1?s=books&ie=UTF8&qid=1483385806&sr=1-1](https://www.amazon.com/Beyond-Veil-Deception-Thoughts-Conventional/dp/1541117409/ref=sr_1_1?s=books&ie=UTF8&qid=1483385806&sr=1-1)

Will we jump or hold? Will we insist that the cure be made available in its current rightly developed form so it will be effective, or buy the fake bait and wait for our 'regulatory' agencies to 'protect' us until they can cash in? Hope is ours. Will we demand it?

2. In our new book you will read of the purposeful alteration of climate change documents espousing a scientific consensus exists relating to the connection between CO2 and global warming. However, if such a relation does exist as it might, or does not as is quite possible considering the effects of solar activity, is not my point. Pollution is most assuredly killing us. Fuel and energy shortages are omnipresent and along with pollution, comprise a seemingly impassible barrier, past which the end of human want

beckons. I have written the new administration several times to tell them the good news: the problems are solved! There is science which has altered and repaired the limits of current quantum and relativistic theories, and it has been fruitfully applied. The result is that clean burning pollution free fuel can be created from diverse sources such as crude oil, waste chemicals or even sewage! The cost is cheap and the refining method more efficient, so, there is not only no pollution but the companies using said technology will make even more money, and of course, fuel shortages are now a thing of the past. Also, intermediate fusion reactions have been achieved in large prototypes with no radiation, excessive cost or excessive temperature. Nuclear waste also, may possibly be a thing of the past. I will link an amazing text with that information.

Santilli R. M. (2005) *The New Fuels with Magnecular Structure*, International Academic Press. <http://www.i-b-r.org/docs/Fuels-Magnecular-Structure.pdf>

<http://www.santilli-foundation.org/icnf.html>

This book is worth a close look!

Foundations of hadronic chemistry:

3. This man claims to have cured cancer with hemp oil. This sounds absurd, however it is possible. I do not say true, I say possible. I will speculate:

<https://www.youtube.com/watch?v=khkEpKM93k8>

a. It is I believe rightly hypothesized that before its legal stricture, the hemp plant provided much needed protein (via the seeds) and nutrition to people and animals, and, was without question consumed as medicine for aeons. Ergo: we have evolved with this plant and its chemical constituents.

b. I conclude a necessary dietary constituent has been removed through legal tampering and now, foods and medicines lack something vital. [Perhaps this partly explains along with environmental contamination, the undue modern emergence of cancers.]

c. Such a longstanding dietary constituent as this particular one will have a great many effects, as it is a highly complex compound! Many illnesses will be influenced to emerge, to remove such a vital and common dietary and medicinal aid. [Compounds missing key elements may not work properly as therapeutic aids.]

So...it is possible. Indeed, the National Cancer Institute has released a few facts concerning the issue:

“Antitumor activity

Studies in mice and rats have shown that cannabinoids may inhibit tumor growth by causing cell death, blocking cell growth, and blocking the development of blood vessels needed by tumors to grow. Laboratory and animal studies have shown that cannabinoids may be able to kill cancer cells while protecting normal cells.

A study in mice showed that cannabinoids may protect against inflammation of the colon and may have potential in reducing the risk of colon cancer, and possibly in its treatment.

A laboratory study of delta-9-THC in hepatocellular carcinoma (liver cancer) cells showed that it damaged or killed the cancer cells. The same study of delta-9-THC in mouse models of liver cancer showed that it had antitumor effects. Delta-9-THC has been shown to cause these effects by acting on molecules that may also be found in non-small cell lung cancer cells and breast cancer cells.

A laboratory study of cannabidiol (CBD) in estrogen receptor positive and estrogen receptor negative breast cancer cells showed that it caused cancer cell death while having little effect on normal breast cells. Studies in mouse models of metastatic breast cancer showed that cannabinoids may lessen the growth, number, and spread of tumors.

A laboratory study of cannabidiol (CBD) in human glioma cells showed that when given along with chemotherapy, CBD may make chemotherapy more effective and increase cancer cell death without harming normal cells. Studies in mouse models of cancer showed that CBD together with delta-9-THC may make chemotherapy such as temozolomide more effective.”

Here are a few additional ‘concerns’ about cancer and other diseases which are utterly troubling:

[https://www.researchgate.net/publication/308780755\\_An\\_Open\\_Letter\\_Regarding\\_Cancer?ev=prf\\_pub](https://www.researchgate.net/publication/308780755_An_Open_Letter_Regarding_Cancer?ev=prf_pub)

Will we jump or hold? Will we insist that this is looked into and hold our elected officials to a *severe and unrelenting* standard or simply step into line, and allow the worst?

Hope is all around us, her arms held wide she waits for us to acknowledge that she offers up a better future. Will we jump or hold. Our better future awaits the answer.
