

Future-Life-Net: A new organization for a new human paradigm

Those of you who are regular readers know I speak much of a "new human paradigm" based on quantum physics. There are a great many of these articles. Here are two. Please enjoy text available on this site or through the following links:

<http://blog.theultranet.com/2014/11/the-affect-information-model-of-physical-consciousness-a-o.html>

<http://blog.theultranet.com/2014/12/human-scientificism-proof-and-the-new-paradigmour-faithless-faith.html>

I have begun a new international cooperative effort with the esteemed Paolo Manzelli and his EGOCREANET, of which I am a part. Please enjoy this intuitive and simple paper on quantum space-time matrix theory, authored by Dr. Manzelli and myself, to which I have contributed in a modest way:

http://media.wix.com/ugd/cf8614_c4011c8cc9574c878b92bedb515185d9.pdf

Here is the charter we have coauthored, which spells out the new organization's goals, purpose and methods. Please do consider participating! The website will not be up for a few weeks.

FUTURE-LIFE-NET

Public Interface : Think Tank

Science Vision For Humanity: Quantum Technology: Genetics: Art

A positive difference—A new future

Our Future is Now.

Future-Life-Net is a worldwide network proposed by EGOCREANET/MIND MAGAZINE designed to foster future horizons of creativity. This intellectual adventure will revolutionize the mechanical limits of industrial knowledge and conscious responsibility to better human life and protect the environment and its biodiversity in the current age of globalization. The impact of the FLN endeavor will include trans-disciplinary research in science, technology and art so as to affect changes in policy, social and economic factors, in order to welcome the future knowledge society. This is to be accomplished through the cooperative and open exchange of ideas, the profits from which will be equally shared amongst contributing members. We will provide: Free access to information and art for the public—and free unfettered scientific discourse aimed directly at solving the more pressing problems of our age. No less than that.

Ideas and topics to be developed currently include:

1. Quantum brain theory
2. Quantum perception
3. Quantum entanglement in life-sciences

4. The Quantum Photosynthetic Solar Cell
5. The bio-molecular DNA "hard drive"
6. The informational encoding of neutral substrates via entangled nonlocal properties (applications in addiction, and drug delivery across the BBB)
7. Instantiation of entangled spacio-temporally encoded photonic information into space-time
8. Quantum Art and Humanities

Today, science creates disciplinary divisions and believes it has found its greatest potential and efficiency. This is not the case. It is in acknowledging the entire system in its connectivity that the greatest understanding and utility is achieved. Words from FUTURE-LIFE-NET/Egocranet's own Paolo Manzelli:

"Gene expression and coordination takes place over spatial distance. The activation of specific sections of DNA is determined by specific conditions of space-time. As we know DNA is wrapped tightly and is not curled up randomly in the center of cells. Therefore, to realize the total number of DNA potentialities expressed from the center of each cell, it must be activated simultaneously in a differentiated way in various parts of the body and brain. Currently genetics believes that the operations of conduct and subsequent activation in specific DNA sections are locally independent from a connectivity program of simultaneous control orchestrating the genetic activities in the body and brain. The mechanistic paradigm has no explanation for the coordination of DNA regulating different body and brain expressions to be fused into a shared program able to grow different cell types, then finally un-structured in programmed cell death ("apoptosis" as a multicellular program). There is only obscurity about the simultaneity of programs concerning both cell life and cell death offered by the temporal mechanical linear paradigm. The description of the factors which enable simultaneous communication and the coordinated simultaneity of separated actions produced by DNA in the body and the brain may be a new important field of Life research. For this it will be useful to change the way we configure Space-Time as proposed in the new structural dimensions identified in Quantum Space-Time Matrix theory." [Manzelli (Norman) 2015: www.mindmagazine.net].

Indeed, just as Paolo Manzelli sees the activities and coordinated dynamism of DNA as an ensemble process orchestrated across a non-locally connected field of information energy, so is the individual human a connected part of such a quantum ensemble of players, of which he himself is both a distinct part, and also, but a coherent integrated piece of the entire. To restructure our preconception of the arbitrarily divided Subject/Object relation as it intersects world observation is an important key of Future-Life-Net Research. Indeed future constructions of knowledge must overcome this dichotomy, and include simultaneity relationships (identifications) for both subject and object integrated into a higher conscious understanding.

FUTURE-LIFE-NET will create a new environment of trust and cooperative spirit, fostering new scientific thought specifically aimed at more responsible innovation, to be funded and developed, alongside providing an idealistic platform to disseminate these

ideas to the public, where they may resonate. Let us be sure we plant a seed of hope and trust, nurtured in the sun of an open mind, a sure vision which creates rather than exploits: for it is both promise and warning to know the fact: *Our future is now.*

To participate, send email through *Mind* magazine, EGOCREANET, or visit:
