

Big Pharma and the Government do care—about money

I have some important news for you! Statin drugs are not heart protective, they are a money making racket. They do lower cholesterol, but the benefits have been faked. These drugs CAUSE heart failure, and sabotage the energy production mechanisms of the cell. These drugs cause the problems they are to prevent. These deadly pills, are worthless, toxic, and, they are: ***the best selling drugs of all time.*** We are paying as idiots to create fake science. I insist: NEVER believe authority...absolutely never.

[http://www.tbyil.com/Statin\\_Drugs\\_A\\_Money\\_Making\\_Con\\_Based\\_on\\_the\\_Cholesterol\\_Hoax\\_Paul\\_Fassa.htm](http://www.tbyil.com/Statin_Drugs_A_Money_Making_Con_Based_on_the_Cholesterol_Hoax_Paul_Fassa.htm)

An enzyme is blocked by statins which thereby suppresses the production of a coenzyme: CoQ10—that harms the ATP production process. The drugs are toxic to mitochondria. Get that. They interfere with K2 production. That means hardening of the arteries. These drugs *cause* heart failure!

Glutathione is interfered with leading to oxidative stress. Also: "An impairment of selenoprotein biosynthesis may be a factor in congestive heart failure."

As is known, statins are associated with cataracts, liver damage, kidney disease, cancer, sexual dysfunction, depression, memory loss, and diabetes.

How have we citizens and a pile of PhD toting pied-piper following, governmental-believing FDA-guided doctors been fooled?

See: <http://www.ncbi.nlm.nih.gov/pubmed/25672965>

"Relative Risk Reduction" statistical analysis has been falsely applied to create the impression that, what are ~one/two percent benefits...revealing a worthless treatment, which harms a great many, are "in fact" 30 and 50 percent gains in the amelioration of pathology. As usual, the government is in bed with the corporations, and we all get to suffer, stay ill, and most importantly of all: Pay. The modern system of money and scientific advancement is flawed, ugly and dangerous. An entirely new way to fund new science is required. We are all being used, injured and fooled. REAL science, needs funding, not big pharma and uncle Sam's typical sadistic plan..."I hurt you, and you pay me." Our government, is... questionable. The monetary system, is cancer. Or perhaps...a heart attack? Please read below:

*Expert Rev Clin Pharmacol*. 2015 Mar;8(2):189-99. doi: 10.1586/17512433.2015.1011125. Epub 2015 Feb 6.

**Statins stimulate atherosclerosis and heart failure: pharmacological mechanisms.**  
Okuyama H1, Langsjoen PH, Hamazaki T, Ogushi Y, Hama R, Kobayashi T, Uchino H.

### Abstract:

In contrast to the current belief that cholesterol reduction with statins decreases atherosclerosis, we present a perspective that statins may be causative in coronary artery calcification and can function as mitochondrial toxins that impair muscle function in the heart and blood vessels through the depletion of coenzyme Q10 and 'heme A', and thereby ATP generation. Statins inhibit the synthesis of vitamin K2, the cofactor for matrix Gla-protein activation, which in turn protects arteries from calcification. Statins inhibit the biosynthesis of selenium containing proteins, one of which is glutathione peroxidase serving to suppress peroxidative stress. An impairment of selenoprotein biosynthesis may be a factor in congestive heart failure, reminiscent of the dilated cardiomyopathies seen with selenium deficiency. Thus, the epidemic of heart failure and atherosclerosis that plagues the modern world may paradoxically be aggravated by the pervasive use of statin drugs. We propose that current statin treatment guidelines be critically reevaluated.

Just in case you imagine that to be a fluke, a simple mistake from our benevolent and protective monetary-based authoritarian government and for-profit industries...please note the following:

It is official, the top grossing drug in America is an anti-psychotic: Abilify. Top money maker. Complete with the usual anti-psychotic profile of horrors, such as permanent ticks and motor symptoms... hideous damage: **Tardive Dyskinesia**. Now, prescribed for depression, typically with an SSRI (such as Prozac or Zoloft), which are themselves quite clearly associated with suicide upon withdrawal. Now let's be clear: these "non-addictive" SSRI drugs, do not themselves cause death upon withdrawal. SSRI drugs (used for depression and OCD) are only correlated with death via one of the most certain findings in all of psychiatry: low 5-HT is associated with suicide. Withdrawal therefore, often leads to death. No...not addictive though. Simply know, if you stop from high doses, you may die. No problem! Now Abilify with its anti-psychotic profile of damage is also handed out like anti-psychotic candy for depression as well. Cha-ching! Ah...the sound of ...health? No. That...spells money. American medicine...is a racket...nearly as lucrative as war. These drugs have a valid place in medicine, and using them as substitute jelly beans is not it. ~7 billion dollars in sales from Abilify, in one year (2014). Money makes for deadly, toxic medicine.

The figures:

<http://qz.com/293932/how-this-antipsychotic-became-americas-best-selling-drug/>

<http://www.thedailybeast.com/articles/2014/11/09/mother-s-little-anti-psychotic-is-worth-6-9-billion-a-year.html>

The facts. Here is information on 5-HT, SSRI drugs, and the result:

So: never believe any authority of any kind...never believe it under any circumstance! Authority wishes only to harm you for its own benefit in all cases! Never trust an ..."expert"...NEVER! ***Become expert instead.*** Just in case, that has not sunk in, please read the following:
