Jeremy Dunning-Davies: [j.dunning-davies@hull.ac.uk](mailto:j.dunning-davies@hull.ac.uk)

This article is dedicated to Peggi Wolfe, a good friend. It is those who survive who hold the burden.

This is a story of a true humanitarian genius named Royal Rife and the facts of reputation and money as they affect scientific honesty and human hope. Science is touted as an objective discipline of fact and deduction but it is an endeavor carried out by people, so it is no surprise that it shares our flaws. “Truth” in science is influenced by the humans who derive it, the social structure in which they work, their personal monetary ambitions and of course those large corporate interests which are so deeply involved, have no small effect on scientific objectivity. The paradigms under which the search for truth takes place define what is or is not observed and believed, that is to say, how data is interpreted. Those paradigms are unfortunately, influenced, supported and refuted as a matter of all too human, highly subjective motivations.

Reputation has great bearing upon what becomes known as scientific truth, and the very paradigm under which science is conducted may well be a human question, a question of reputation, corporate and social influence, money (quite naturally) and so *not one* of fact. The result is that the following surprising truths have been brutally suppressed: “Cancer has been cured since 1934. The cure is painless, and cheap. This same method may cure a great many diseases.” Could this be right?

How could such a fact be hidden? Reputation, power, and greed are the familiar answer. These have affected the paradigm under which data is understood, and influenced what has been suppressed or accepted as proper science. Doctors and researchers of high character unknowingly labor under a false paradigm. The cog often fails to realize the machine of which it is a part. To understand the tragic story of Royal Rife, and the even deeper resultant tragedy of the millions of needless painful deaths from cancer and other diseases, we must first examine the history.

Reputation is truth in science. Science is no different from any other human enterprise, and it is affected by human frailty, and hubris. There is a paradigm known as pleomorphism which has been rejected. Disease processes are sustained by way of transformations in biological structures such as cell types, which are therefore themselves *processes*. Pleomorphism is defined as: The assumption of various distinct forms by a single organism or species. (Dorland’s *Illustrated Medical Dictionary*). Orthodox theory is monomorphic, and does not acknowledge this long observed notion of transformative biological processes. Why?

Many have long ago deduced pleomorphism to be valid. Pierre Bechamp was one of them. Louis Pasteur has staked his reputation on the converse view. Bechamp deduced after years of detailed study, that bacteria could change form. Rod like structures for instance could become spheroid but even further, he noted that the size of these

organisms could also vary, and devolve into smaller organisms which were unseen, that he called *microzymia*. This point is crucial. However, Pasteur's reputation was great, and Bechamp, whose work was later proven correct, was soundly crushed and his ideas excluded from accepted practice. The paradigm science labored under for much of the 20th century was thereby hobbled. Thomas Rivers of the Rockefeller Institute derived a technical scientific distinction regarding the reproduction of a virus which, although false, cemented his lauded place in the discipline of virology. He introduced the notion that a virus requires *a natural cell* in which to reproduce. His aggressive personality and great monetary resources made him impossible to disagree with, although he was wrong. Dr. Arthur Kendall was unable to defeat Rivers's powerful reputation and formidable personality, but did prove himself scientifically correct by culturing virus strains in an artificial "K Medium" of his own design, and he provided assistance to Royal Rife. Rife, would demonstrate the correctness of the rejected pleomorphic paradigm, and prove over and over that *filter-passing organisms*, meaning very tiny pathogens which are able to pass through filters and may cause full blown disease such as cancer, could be derived from cancer tumors. Rife, would soon discover the impossibly small "invisible" cause of cancer, and allow its direct observation *in a living state* with a new type of microscope which is still unequalled today, and also uncover the lethal frequencies to apply using a specific new instrument to devitalize the tiny bug, which kills man. For this, he would be personally ruined and his work suppressed, at unimaginable human cost.

The cure for cancer and its suppression are an American tragedy which is ongoing. There is a pattern which can be observed repeatedly. Once Kendall and Rife filtered and saw the tiny pleomorphic form of typhus, and proved that this could be done, Milbank Johnson, a prominent and influential physician, USC professor of physiology and clinical medicine, and, Chairman of the Special Research Committee arranged a gathering of thirty top scientists on November 20th 1931 to announce the fact, as was reported by the Los Angeles Times on November 22nd 1931. On December 27th of 1931, The Los Angeles Times reported that Rife had demonstrated his microscope to over 250 scientists. Soon Kendall was asked to speak before the Association of American Physicians on May 3rd and 4th 1932. It was here, that Rivers and his cohort Zinsser, whose *Bacteriology* is still used in an updated version today, struck. The attack was verbose and unscientific yet effective in discrediting the correct work of Kendall and Rife, which contradicted their own views. Dr. William Welch an esteemed authority in bacteriology rose to Kendall's defense stating "Kendall's observation marks a distinct advance in medicine," and in August of 1932 *Science* magazine itself published a report on Rife's microscope stating, "There can be no question of the filterable turquoise blue bodies described by Kendall. . . examination under the Rife microscope of specimens...leaves no doubt of the accurate visualization..." but the damage was done. Rivers and Zinsser had the weight of reputation and power. Here, in a first peripheral way we see the same ever increasing pattern which will be applied again and again: incorrect science, power, reputation and money destroy good men, tarnish their reputations, corrupt good science and suppress the truth.

In 1932 Rife found the cancer virus. In 1934, he would cure cancer in humans using his frequency instrument.

Rife began using Kendall's K Medium in 1931 to attempt the isolation of the cancer virus from breast tumors. The medium and microscope in this case, were not enough and a fortunate accident whereby he irradiated a sample inadvertently proved to be a decisive advantage, allowing the virus to be visualized. The incredibly small and virtually invisible structure had a breadth of one twentieth of a micron, and showed up under the microscope as purple/red in color. The experiment was then repeated 104 times, and thus confirmed. 4 distinct forms were observed, distinct forms of the same organism. That organism, the filter passing "BX" as he called it, could reliably produce cancer in laboratory animals, as was repeated 300 times. This same organism could be transformed, depending upon the conditions and media used, into different structures found in cancer patients, a fungus, or as was later shown into bacillus coli! Pleomorphism was correct. Next he painstakingly determined the Mortal Oscillatory Rate to which the BX was attuned, and used the frequency instrument to destroy the BX. He then inoculated no less than 400 animals with filtered BX preparations, created tumors and cured those animals *over 400 times*, before attempting the first human case. Rife, was a careful and meticulous scientist.

In 1934, Dr. Milbank Johnson again gave steadfast support and was instrumental in opening the clinic in La Jolla where cancer would be first cured in the human animal. To minimize the accumulation of toxins from the dead pathogens, it was soon learned the treatment was best used for only three minutes and given at three day intervals. Of the 16 "hopeless" cases, 14 were cured in three months time. No rise in body temperature or discomfort was reported. Dr. Alvin Foord oversaw the project as chief pathologist. Chief Surgeon Whalen Morrison, George C. Dock MD, George Fisher MD, Dr. Kendall, Dr. Zite, professor of pathology at Chicago University, and Rufus B. Von Klein Schmidt President of the University of Southern California were on staff, and, Dr. Couche and Karl Meyer PhD, head of the department of bacteriological research at the Hooper Foundation, were present. Dr. Koops of the Metabolic Clinic in La Jolla signed all 14 reports and knew of the tests from his personal observation. In 1934, Royal Raymond Rife had cured cancer.

This was not an isolated fluke. Other clinics were soon opened, and more people were cured. Dr. Couche opened a clinic and although surviving records are scant, it is clear that three patients were cured of cancer. Dr. Johnson opened a clinic of his own to reports of more success treating various conditions. Later in 1939, Dr. Richard Hamer of the Paradise Valley Sanatorium rented a frequency instrument, and proved himself adept in its use. A very organized and careful practitioner, he often treated as many as 40 patients a day, and achieved stunning results in his National City clinic, cleaning up and curing a great many conditions. Between 1934 and 1939 a very great deal of hope was brought to fruition, and unfortunately...someone noticed.

### **The suppression and destruction of Royal Raymond Rife—reputation, greed and our scientific dark age:**

The case of an 82 year old man successfully treated by Dr. Hamer reached the powerful

head of the AMA in Chicago: Morris Fishbein. The single dominant force in the AMA at that time, he was belligerent, ruthless and it is to be plainly noted that he never practiced medicine as an MD for even a single day in his life past his residency. His was a smothering and potent personality, revealing him as a political animal of the first order.

In 1939 Fishbein sent a fateful message through the California branch of the AMA seeking to buy into Rife's work and his new company, Beam Ray. Rife refused. This was the start of the end. In analyzing this supreme error, we can learn much. Rife worked with Hoyland, a self-interested and arrogant man who thought himself above his partners. He and Fishbein gathered forces. Hoyland was provided high priced lawyers. Hoyland would own Beam Ray, and Fishbein could then buy in. To refuse Fishbein, was a tragic error. When the devil knocks there is little choice but to let him in, lest he burn the house to the ground.

Rife was a patient, genteel and kind man, an intellectual, engineer and scientist who was about to enter an ugly bully's world of money, brutal assault, cruelty and blatant injustice: the American legal system. Cancer he had cured, but politics? This would soon metastasize and consume him. The opposing lawyer cut into him and attacked him. Rife was unprepared, and although the case was settled in due course in Rife's favor, the experience destroyed him on a human level...his nerves gave way. He was so deeply affected, that a doctor he trusted advised he take up strong drink, at once. This, began his deterioration into alcoholism, and depression. Beam Ray would be ruined, Rife shattered and the cure for cancer snuffed out. What Fishbein could not own, he would destroy. That, was that.

In a strange pair of "coincidences" the only other lab making substantial progress in the field, that of J. C. Burnett, a \$250,000 lab in 1929 dollars with \$500,000 invested in research and the many careful records within it, were all burned to the ground as its owner visited Rife later that year. Rife's staunch supporter Dr. Milbank Johnson would die under suspicious circumstances a few years later, perhaps poisoned according to federal inspectors, all directly before it appeared he was to announce an important breakthrough in the cure of cancer in 1944, after which his records and those of his Special Research Committee mysteriously..."vanished." Throughout this period, and afterward in the case of Rife's new partner John Crane, records and equipment were illegally seized and destroyed, and doctors intimidated into giving up the search. Dr. Couche continued the work anyway, and had his membership revoked by the AMA. Publication of one article escaped the censorship and can be seen here, as represented in the Smithsonian Annual Report, of 1944.

<http://www.rife.org/magazine/smithsonian.html> Soon after its publication the report's author Dr. Raymond Seidel was shot at, a bullet slamming through his windshield as he was driving.

In the Smithsonian Annual Report of 1944 we read:

". . . disease organisms such as those of tuberculosis, cancer, sarcoma, streptococcus, typhoid, staphylococcus, leprosy, hoof and mouth disease, and others may be observed to

succumb when exposed to certain lethal frequencies peculiar to each individual organism . . ."

Dr. Royal Lee of the Lee Foundation for Nutritional Research in Milwaukee spent time with Royal Rife and commented as follows:

"No medical journal was ever permitted to report on Rife's work. This one by the Franklin Institute [reprinted in the Smithsonian report] slipped by the censors, since this organization is not medical but supports general scientific activities. But that mistake was soon rectified, it appears, as there is still no general knowledge of Rife's epoch-making discoveries. Again, the iron curtain of Fishbein is effective. . . . We can give a list of various subjects on which this censorship is rigorously applied. Only the treatment of disease with synthetic drugs is carefully reported. Botanicals are played down, food as remedies are almost as taboo as Rife's work. . . the official definition of a medical remedy for disease. . . excludes automatically any vitamin, nutritional mineral or enzyme. . ."

Was there a cover up? Please take a look at this video presentation of his laboratory. Observe the massive investment and many pieces of advanced custom equipment Rife created. Observe his highly advanced work and surgical technique. Was there a cover up? Ask yourself, what happened to all of this? It appears to have vanished...without a trace.

<https://www.youtube.com/watch?v=fynOk-Yldts>

Cancer has been cured since 1934, and no one knows it. Fishbein, has won. When it is understood how quickly radiation machines were sold to hospitals, often with deadly result, the scope of the loss of proper testing, commercial availability and distribution of Rife's work becomes clear. Painless, three minute treatments with no side effects. Cancer, has been cured. No one knows.

We ask: is this true?

We suggest: *we must find out.*

### **The current situation and other previous substantiation:**

Not surprisingly, the evidence of these facts "inexplicably" keeps showing up over and over in new work, and its imprint can be located also in history. Rife has of course, been publicly humiliated, misrepresented, ignored and discredited, although he was correct. His work is called a "myth." But the fact will not rest, for it is the fact. These..."mysteries"...abound. The cowardly suppressive reactions to them are also in evidence.

Rous had long ago discovered a cancer virus for which he would all too belatedly receive a Nobel Prize. In 1948 Dr. Virginia Livingston-Wheeler began studying tumors in which she then found the same organism. She came across the work of Dr. Eleanor Alexander-

Jackson who demonstrated that tubercle bacillus went through many changes, (as Kendall, Rosenow and Rife had shown already in the 30s, a fact which had been forgotten).

Livingston-Wheeler found the extraordinary pleomorphism intriguing and wondered if cancer behaved pleomorphically. Her paper which confirmed the fact was published in 1948 in *The New York Microscopical Society Bulletin*. It concluded as follows:

“In conclusion it may be stated that a definite mycobacterium is observed in many kinds of tumors. Its presence within the tumor cells as well as within the blood of the patients suffering with the disease can be demonstrated.” Livingston-Wheeler and Alexander-Jackson had demonstrated that Rous had found a virus which was *in actuality a pleomorphic bacterium*.

Livingston-Wheeler's assertions of pleomorphism were confirmed in 1950 by Dr. James Hillman of RCA labs in Princeton NJ. via electron microscopy, whose observations gave confirmation of the filtered form.

Dr. Irene Diller of the Institute for Cancer Research in Philadelphia had isolated fungus from cancerous growths in animals. Here again, was the work of Rife and Gruner, which demonstrated the changeability, the pleomorphic alterations and transformations between the BX, and a fungus. In December of 1950, *The American Journal of Medical Sciences* published Livingston-Wheeler's paper detailing how cancer cultures taken from humans and also from animals caused cancer in animal tests. Then, new cultures proved that cancer could be caused by a form of bacterium! The hurtful dismissal of this claim by Rivers and the rest, had been shown...wrong. Naturally, her discovery had all but no influence upon the situation. The cancer industry, and orthodox scientific establishment had its own plans.

Dr. Diller published in 1953 her own discovery of confirmation of the transformation between fungus, and the cancer microbe: *Studies of Fungoid Forms Found in Malignancy*. *The Washington Post* Sep. 9, 1953 reported from Rome of their findings and ideas that: “An American research group today pictured cancer as an infectious disease. . . . ‘Cancer does not consist of a localized tumor alone.’ Instead, they pictured it as a generalized disease caused by an organism in the human bloodstream.”

When the scientists returned home to their lab, they discovered that Dr. Rhodes of Memorial Sloan Kettering Cancer Center had shut down their work and stopped funds for the Rutgers-Presbyterian Hospital lab. The lab was shut down! Like Rife, Alexander-Jackson and Livingston-Wheeler found that their work was now...nothing. Efforts to produce a vaccine, were simply not acceptable. Surgery, radiation, chemotherapy, these ideas, *only these*, have merit and deserve funding. Inexpensive cure was not in the cards. A new approach was not acceptable. Money. Reputation. This is modern medical practice and research. This...is tragedy.

In 1983, Livingston-Wheeler wrote in her book, *The Conquest of Cancer*:

“Because of the suppressive actions of the American Cancer Society, the American Medical Association and the Food and Drug Administration, our people have not had the advantage of the European research.

This work has been ignored because certain powerful individuals backed by large monetary grants can become the dictators of research and suppress all work that does not promote their interest or that may present a threat to their prestige.”

She demonstrated that cancer is not as accepted orthodox science proposes. In the New York Academy of Sciences report from October 30 1970 we read:

"Microorganisms of various sorts have been observed and isolated from animal and human tumors, involving viruses, bacteria, and fungi. There is, however, one specific type of highly pleomorphic microorganism that has been observed and isolated consistently by us from human and animal malignancies of every obtainable variety for the past twenty years. . . that organism has remained an unclassified mystery, due in part to, its remarkable pleomorphism and its stimulation of other microorganisms. Its various phases may resemble viruses, micrococci, diptheroids, bacilli, and fungi."

Today a musicologist turned cancer researcher named Anthony Holland is shattering cancer cells with targeted frequencies. He was inspired by the work of Rife. His approach is aimed at the cancer cells themselves. Will he succeed? Will the cells cause toxic shock in the body to be shattered? Does the source pathogen, the pleomorphic BX need to be targeted? Let us look to this fine man, and see if he can find for us the answers.

Now Luc Montagnier, the famous scientist who had won a Nobel Prize for his discovery of the AIDS virus, has found some strange effects, whereby filtered and presumably sterile preparations derived from cancer, appear to reconstitute disease related organisms in cultures, and hypothesized with good supporting evidence the existence of aqueous nanostructures of a mysterious sort, offering us also in other work a glimpse into the quantum aspects of what possibly appears to be the mechanics of pleomorphic transformations. Naturally, he is accused of poor lab technique and contamination in his experiments. Do you believe this Nobel Prize winner cannot prepare a proper experiment? What is happening here, why not look into the mysterious aqueous nanostructures, so akin to the BX or perhaps some quantum informational part of pleomorphic processes? Instead, his reputation is tarnished and insults abound. Can you see it? If he is right, many diseases, not just cancer but perhaps Alzheimer's, Parkinson's, Multiple Sclerosis, Rheumatoid Arthritis and a great many more may be treatable, or even curable. Does this seem familiar? Can you see it? We must discover, if this is true.

It should be remembered also that dismissal of the pioneering work of Rife is not confined solely to America. On the web page of Cancer Research UK, reference is found to Rife and his work but most of the statements contained therein are erroneous. Firstly, and possibly most importantly, Rife's work and all his results were based on the use of his own microscope and his own Frequency Instrument – not on the so-called Rife Ray

machines on sale today. Again importantly it should be noted that all the talk on this site refers to the Rife machine destroying cancer cells but, in truth, the original claim of Rife was that his machine enabled him to destroy the microbe which caused the production of cancer cells and, having destroyed the microbe, the cells eventually returned to their original healthy state. They also claim that the Rife approach has not been through the usual process of scientific testing and, in a sense this is true but, as shown above, such a statement is nowhere near the real truth. Rife's approach was meticulously tested and was open to further, more public testing but this was maliciously denied and his work is now largely forgotten.

In 2007, in the book *Exploding a Myth*, the whole question of the existence and influence of these same destructive influences operating in the discipline of physics was explored through several examples. The restrictions placed on true open minded original thought were noted and it was pointed out that, while such problems in pure physics might not concern many people, if such restrictions did occur in physics then they would occur in other branches of science and, if the branch involved was medicine, then it was putting peoples' lives at stake. It is tragic to reflect that the facts outlined above indicate the correctness of that earlier prophesy.

We have found that drugs, so toxic and profitable, might be replaced with safe quantum information. Are we right? Is there value in this idea? Can the multitude of horrible diseases be cured by spotting the common pleomorphic mechanics of their replication, and addressing the problem with inexpensive painless treatments? Can we do today what Rife already accomplished so long ago? These are the questions of the future.

This time, we will be smarter. The only "legal" way to treat a disease is with a drug. We will call the treatment a drug. Obviously, some form of "protection" is needed, if we are to succeed. "Fishbein," meaning the AMA and the FDA must be "cut in" from the start. Perhaps then, we can try. When the devil knocks, we must pay the protection fee. This is best.

We suspect with all our intelligence and human spirit, we deeply suspect, that it is so.

Is this true? We propose:

Cancer has been cured since 1934. Let us weep, and remember. Then, let us begin again.

[This article owes a clear and substantial debt to Barry Lynes's excellent book: *The Cancer Cure that Worked*.]
